

1. (4 Pts) Label the acid, base, conjugate acid and conjugate base in each of the following.

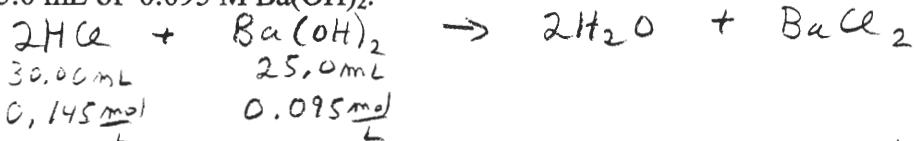

2. (4 Pts) Circle all of the Strong acids below.

H_2CO_3 H_2SO_3 H_2SO_4 HClO HClO_4 H_3PO_4 CH_3COOH HNO_3

3. (6 Pts) Complete the following table:

Acid or base	pH	pOH	$[\text{OH}^-]$	$[\text{H}_3\text{O}^+]$
0.025 M HCl	1.60	12.40	3.98×10^{-13}	0.025
0.0050 M Ba(OH)_2	12.00	2.00	0.010	1.0×10^{-12}
Strong acid	2.45	11.55	2.81×10^{-12}	3.55×10^{-3}

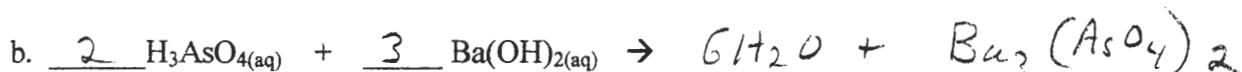

4. (6 Pts) Determine the pH and the pOH of the solution that results in the reaction of 30.0 mL of 0.145 M HCl with 25.0 mL of 0.095 M Ba(OH)_2 .

$$\text{moles H}^+ : \frac{30.00\text{mL}}{1000\text{mL}} \left| \frac{0.145\text{mol HCl}}{1\text{HCl}} \right| \left| \frac{1\text{H}^+}{1\text{HCl}} \right| = 0.00435 \text{ mol H}^+$$

$$\text{moles OH}^- : \frac{25.0\text{mL}}{1000\text{mL}} \left| \frac{0.095\text{mol Ba(OH)}_2}{1\text{Ba(OH)}_2} \right| \left| \frac{2\text{OH}^-}{1\text{Ba(OH)}_2} \right| = 0.00475 \text{ mol OH}^- \leftarrow \text{XS Reactant}$$

$$[\text{OH}^-]_{\text{XS}} : \frac{(0.00475 - 0.00435) \text{ mol OH}^-}{55.0 \times 10^{-3} \text{ L}} = 0.00727 \quad \boxed{\text{pOH} = 2.14 \quad \text{pH} = 11.86}$$

5. (4 Pts) Complete and balance each of the following reactions (assume complete neutralization).

6. (1 Pt) Supply a definition of an acid.
